

CHEMZYME FRESH

Biological Cleaner for Low Water Usage Urinals and Washroom Areas

Product Code: 1532

Pack Size: 5 litres

Health and Safety Category D

Chemzyme Fresh has been designed to be used to clean urinals where the Chemzyme Block in Cage System is in place.

Chemzyme Fresh is an optimized combination of enzyme producing bacteria together with surface active agents which is designed to effectively clean low water usage urinals.

Chemzyme Fresh is a concentrated product and should be used at a dilution of 4 to 1 with water and applied from a trigger sprayer . The process simply involves spraying the urinal with Chemzyme Fresh. The water flush can be turned off completely. A once daily wet down with 1 litre of water is recommended.

It is essential that a biological cleaner is used where the Chemzyme Block in Cage is in place. Ordinary chemical based cleaners will destroy the biological process.

Chemzyme Fresh is environment friendly, containing naturally occurring “friendly” bacteria which digest dirt and odour causing materials.

-  Eliminates foul odours
-  Helps maintain free-flowing pipe-work
-  Natural biological action – harmless in the environment
-  Reduced water usage
